

DELIVERING BETTER LEARNING OUTCOMES IN FIVE MONTHS

The Kettering Science Academy took over from the Ise Community College and the Henry Gotch Primary School, specialising in Science, Business and Enterprise, and opened in September 2009.

The Academy is an independent state school, offering the highest standard of education to young people in the Kettering area. It has 1770 places between the ages of 5-18 years old, this includes: a 30 place nursery; a two form entry primary school for 5-11 year olds; 1100 places for 11-16 year olds; and 250 sixth form places.

New buildings will be delivered through Partnership for Schools (PFS) through the National Framework. Moving in is programmed to take place on or before September 2013.

EC Harris was appointed by the DCSF and the Sponsor, the Brooke Weston Academy Trust, to manage the delivery of the new Academy - this involved co-ordinating all activities and liaising with stakeholders including the local authority, Northampton County Council.

The key challenge for the project was to deliver this all-age academy in an accelerated programme of just five months.

Creating solutions

A full time dedicated and experienced Project Manager was assigned to the project, he was on site for three days a week to give maximum visibility to the project and allowing for any issues or concerns to be addressed as soon as possible.

The multi sponsor had already opened two academies, making it essential for EC Harris to be clear from the outset which elements of school organisation and policies the Brooke Weston Trust would be bringing with them to this Academy.

“The key challenge for the project was to deliver this all-age academy in an accelerated programme of just five months.”

“The project passed all areas of Pre-Opening OFSTED despite the buildings being very run down. Hundreds of young people in the Kettering area are now benefiting from learning advantages the Kettering Science Academy has to offer.”

The firm took a pragmatic approach to stakeholder engagement management to build upon what the sponsor had already achieved and ensure there was consistency throughout the project.

The project team was able to draw from a wide range of technical experts within EC Harris and from its managed community, including Stakeholder Engagement Management, Legal and Governance, and ICT.

Adding value

EC Harris delivered the academy programme within the challenging timescale. The firm was also able to bring in additional support to survey the kitchen and catering areas to ensure that the Sponsor achieved the maximum impact from the Environmental Quick Wins.

The project passed all areas of Pre-Opening OFSTED despite the buildings being very run down. Hundreds of young people in the Kettering area are now benefiting from learning advantages the Kettering Science Academy has to offer. The academy will also help catalyse the wider regeneration of the local area.
